This Read Me alerts you to software changes and late-breaking information that was too late to include in the manual. We recommend that you print this document for easy reference and keep it with your documentation.

INSTALLATION

See your manual for full instructions on installation. In most cases the following procedure is appropriate. You may need to disable virus protection software before proceeding.

1. Click on the 'Installer' icon on the 'RasterOps DSPro' disk.
2. Click 'Switch Disk' until you have selected your startup disk.
3. Click 'Install.'
4. Restart your Macintosh.

The installer will copy the appropriate files into the System Folder, and will create a folder called 'RasterOps DSPro Folder'. This folder will contain the DSPro plug-in for Adobe PhotoShop. You will need to copy the DSPro plug-in into Adobe Photoshop's Plug-ins folder for the DSPro functions to work.

NOTES

1. GWorld memory must be enabled to use the DSPro filters.
2. Virtual Memory should be turned off.

HOW TO REACH RASTEROPS TECHNICAL SUPPORT
